                                      AAF81741 to AAF81777 encode the human membrane associated proteins (MEMAP) given in AAB74695 to AAB74731. MEMAPS have cytostatic, antidiarmatory, anticonvollabant, immunosuppressive, antidiarneic and antidonvollabant, immunosuppressive, antidiarneic and antidiarneic and antidiarneic activities, which can be used in gene therapy.

MEMAPs and agonist of MEMAPs can be used to treat a disease or condition associated with decreased expression of functional MEMAP and antidonists of MEMAP are used to treat a disease or condition associated with coverexpression of functional MEMAP. These disorders include cell coverexpression of functional MEMAP. These disorders and gastrointestinal disorders. The MEMAP polyvucleotides and proteins are also used for the disorders. Inflammation, atherosclerosis, epilepsy and diarrhoea. MEMAP proteins can be used to screen for compounds which specifically bind MEMAP proteins and used to screen for compounds which small can be studied to provide information concerning human disease. Anti-MEMAP antibodies are useful in immunoassays for the canimals which can be studied to provide information concerning human disease. Anti-MEMAP antibodies are useful in immunoassays for the canimals which associated with MEMAP. Polymucleotides encoding MEMAP can be delivered to target calls with genetic abnormalities with respect con be delivered to target cells with genetic abnormalities with tespect and when the expression of MEMAP to treat or prevent a disorder associated with

The present invention relates to hepatic-fibrosis disease markers haftpedisty-bapsols); and related proteins (ABF9063-ABF90917). The ABF9063-ABF90917). The reading hepatic fibrosis caused sequences are useful for detecting and treating hepatic fibrosis caused by alcohol consumption, virus infection, etc., and the associated chronic bepatities, etc. leading to liver cirrhosis and hepatic actionan. The markers allow the cause of hepatic fibrosis to be clarified (diagnostic precision), so more suitable treatments can be developed and given.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    146
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             206

AXX52213-74 encode secreted and transmembrane human proteins, and are obtained from cDNA libraries prepared from fetal lung, fetal kidney, cletal brain, fetal liver and fetal retina. The encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. PRO21 and PRO217 can be used for disorders associated with the preservation and maintenance of gastroinestinal mucosa and the repair of scute and chronic mucosal lesions (e.g. entercollists, Zollinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus arrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the ulseases related to growth or survival of nerve cells including PRO255 can be used as for fibromodulin, e.g. for reducing dermal scring, PRO264 can be used as a target for anti-tumor drugs PRO533 may be used as an anti-thrombotic agent; PRO287 polypeptides and portions may be used as an anti-thrombotic agent; PRO287 polypeptides and portions may be used for treating problems of the kidney, uterus, endometrium, can be used for treating problems of the kidney, uterus, endometrium, can be used for treating problems of the kidney, uterus, endometrium, can be used for related tissue, e.g. in the heart of genital tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      69 agagagagagaaacaaaaaccaaagagagagagaaaaaarcgartcarcraaarcarcrga 128

The invention relates to a novel nucleic acid encoding a PRO polypeptide. The polypeptides and polynuclectides of the invention may be useful as research tools and as therapeutics for treating enterocolitis, Zollinger-Bilson syndrome, gastrointestinal ulceration, psoriasis, cancer, Parkinson's disease, Alzheimer's disease, ALS, neuropathies, dermal scarring and wound healing, nerve repair, thrombosis, bone and/or cartilage formation, anglogenesis, asthma, rheumatoid arthritis, multiple sclerosis, inflammatory disorders, atherosclerosis, cardiac injury, infertility, premature aging, AIDS, diabetes complications and stroke. The molecules may also be utilised during gene therapy procedures and transgenic animal production. The current sequence is that of the human

                                                                                                                                                                                                                       The present sequence is one of sixty one nucleic acids encoding novel secreted and transmembrane PRO polypeptides. The PRO polypeptides are useful for treating skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma), gastrointestinal disorders (e.g. enterocolitis), neurodegenerative diseases (e.g. Alzhaimer's disease, Parkinson's disease), wound repair, cardiovascular disorders (e.g. endometrial bleeding angiogenesis, ischaemias such as coronary ischaemia, atherosclerosis), inflammatory disorders (e.g. asthma, rheumatoid arthritis, multiple sclerosis), infortility, AIDS and diabetes and retinal disorders such as retinitis pigmentosum. The PRO nucleic acids have applications in molecular biology, including use as hybridization
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     carcirricaaaccrereareaeaaaaerrrcaecraccreaeaarrrcacaeaecrere
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CTGCTACAGTGAGGCATCAGGTTCAGTCAAGAATTGCTGTCCTTTGAACTGGAAACATTA 383

primers PAS45925-AAS46231 represent DNA molecules encoding and PCR primers for PRO polypeptides of the invention. The sequences of the primers for PRO polypeptides of the invention. The sequences of the invention can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of comparing the level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, bigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human contacted with it. A specific polypeptide can be used to stimulate the proliferation of differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also canceptablibility to tumour development, particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or the PRO nucleic acide can be used for genetic analysis of individuals with genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    206
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               185
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                245
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       305
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         383

The invention relates to an isolated nucleic acid with at least 80% nucleic acid sequence identity to a nucleotide sequence encoding one of 61 secreted/transmembrane polypeptides, or PRO polypeptides or encoding a PRO protein extracellular domain. Also included are a vector comprising the PRO nucleic acid, a host cell comprising the vector, producing a PRO polypeptide (by culturing the host cell for the expression of the PRO polypeptide, and recovering the PRO polypeptide from the cell culture), an isolated PRO polypeptide (having at least 80% sequence identity to: (
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New transmembrane polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, in chromosome identification, as chromosome markers, in generating probes and in tissue typing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Botstein D, Desnoyers L, Eaton DL, Ferrara N; Fong S, Gao W, Gerber H, Gerritsen ME, Goddard A; Grimaldi JC, Gurney AL, Hillan KJ, Kljavin IJ;

acid sequence encoded by a nucleic acid molecule deposited with an ATCC acid sequence encoded by a nucleic acid molecule deposited with an ATCC unuber (detailed in the specification); or (c) an extracellular domain of a PRO polypeptide or to a PRO polypeptide lacking its associated signal peptide), a chimaeric molecule comprising a PRO polypeptide of fused to a heterologous amino acid sequence, an anti-PRO antibody, detecting a PRO245 or PRO1868 in a sample suspected of containing the polypeptide, clinking a bioactive molecule to a cell expressing a PRO245 or PRO1868 uncleic acids which encode PRO and be used to generate either transgenic animals or knock-out animals which may be used in the crimals and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy, in chromosome identification, as chromosome markers, or in generating probes. The PRO polypeptides are used for recombinantly expressing those markers. The PRO polypeptides and nucleic acids may also be used in tissue or properties and nucleic acids may also be used in diagnostic assays for PRO, and in affinity purification of PRO from recombinant cell culture or natural sequences. The present sequence encodes a PRO protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to three hundred and five nucleic acids encoding PRO polypeptides (secreted and transmembrane), sequences 80% identical to the procession of the acking its associated signal peptide or an extracellular domain of the PRO polypeptide, with or lacking its associated signal peptide. Also included are the encoded PRO proteins, produce PRO proteins, a chimaeric molecule comprising the PRO proteins, produce PRO proteins, a chimaeric molecule comprising the PRO proteins, and produce PRO proteins, a chimaeric molecule comprising the PRO proteins, and produce PRO proteins, a chimaeric molecule comprising the PRO proteins of antibody, a method for stimulating the release of tumor necrosis factor alpha (TMP-alpha) from human blood (by contacting the blood with PRO1079, PRO1131, PRO1134, PRO1134, PRO1134, PRO1134, PRO1134, PRO1134, PRO1136, PRO11657 or PRO4333), a method for stimulating the proliferation or differentiation of chondrocyte cells by concacting the cells with a PRO6029 polypeptide, a method for detecting the presence of tumour in a mammal and an oligonacleoside probe derived from any of the nucleotide sequences cited above. The PRO polypeptide or anti-PRO antibody is useful for preparing a method for trading antibody. The PRO nucleotide sequences are useful colligonament for trading antibody. The PRO nucleotide sequences are useful a binding reaction, to generate transgenic animals or knockout an immals, which in turn are useful in the development and screening of therapeutically useful reagents, for chromosome identification, and proliferation or differentiation of chondrocyte cells, sequences are also useful for detecting the presence of a tumour in a mammal, withing the presence of a tumour in a mammal, and continue the affeiting the presence of a tumour in a mammal, and the detecting the presence of a tumour in a mammal, and the anti-PRO antibodies may be used in diagnostic assays for CPRO, or for the affinity purification of chondrocy cells in demining a propried and proper in a molec
                                                                                               Three hundred and five nucleic acids encoding PRO polypeptides, useful in gene therapy, chromosome identification, tissue typing, and for detecting the presence of tumor in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     323

in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant techniques and in gene therapy (e.g. for replacement of defective gene). The PRO polypeptides are useful as molecular weight markers for protein electrophoresis purposes, for chromosome identification, as chromosome markers, as therapeutic agents, for stimulating the release of TNF-alpha from human blood, for stimulating the proliferation or differentiation of chondrocyces and detecting the presence of a tumour. The PRO polypeptides and nucleic acids may also be used diagnostically for tissue typing. The sequences presented in ACADS-O-ACADSOOG are the cDNAs encoding the PRO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to three hundred and five nucleic acids encoding PRO polypeptides (secreted and transmembrane). Methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of tumours, such as adrenal, lung, colon, breast, prostate, rectal, cervical or liver tumours. The PRO polypeptides are also useful as molecular weight markers, or for chromosome identification. The PRO genes are useful as hybridisation probes, or for screening libraries of human CDNA, genomic DNA or mRNA. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The present sequence represents a CDNA encoding a human PRO polypeptide of the
                                                                                                                                                                                                                                                                                                      transmembrane
                                                                                                                                                                                                                                                                                                     Three hundred and five nucleic acids encoding secreted and transmembrand PRO polypeptides, useful for the diagnosis, prevention and/or treatment of tumors, such as adrenal, lung, colon, breast, prostate, rectal,

/lan_note="Varior bills" // Jan_note="Vector: pSPORT; Site_1: Sal1; Site_2: NotI; This clone is among a rearrayed set of 15.247 clones from 11 embryo cDNA libraries (including preimplantation stage embryos cDNA libraries (including preimplantation stage embryos from unfertilized egg to blastocyst, embryonic part of E7.5 embryos, extraembryonic part of E7.5 embryos, extraembryonic part of E7.5 embryos, and E12.5 female mesonephros/gonad) and one newborn ovary cDNA library. Average insert size 1.5 kb. All source libraries are cloned unidirectionally with Oligo(dT)-Not primers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence-clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Contact: Yoshihide Hayashizaki

```
nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
CDNA library was prepared and sequenced in Mouse Genome
Encyclopedia Project of Genome Exploration Research Group in Riken
Genomic Sciences Center and Genome Science Laboratory in Riken.
Division of Experimental Animal Research in Riken contributed to
prepare mouse tissues.
Tissues were provided by Dr. John Todd (Dept. of Medical Genetics
Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome
Trust/MRC building Addenbrookes Hospital Cambridge) whose
assistance we gracefully acknowledge.

/clone is among a rearrayed set of 15.47 Clones from 11 enbryo cDNA libraries (including preimplantation stage embryos from unfertilized egg to blastocyst, embryonic part of E7.5 embryos, extraembryonic part of E7.5 embryos, extraembryonic part of E7.5 embryos, and R12.5 female mesonephros/gonad) and one newborn ovary cDNA library. Average insert size 1.5 kb. All source libraries are cloned unidirectionally with Oligo(dT)-Not primers.
